EDUCATION

JSS Academy of Technical Education

B.E in Information Science and Engineering — CGPA: 8.4

Bangalore, India

2022–2026

TECHNICAL SKILLS

Programming Languages: Java, JavaScript, SQL

Backend Engineering: Spring Boot, REST APIs, JPA/Hibernate, Authentication & Authorization, Microservices, API Design

Frontend Development: React.js, HTML/CSS, Mantine UI

Databases & Messaging: PostgreSQL, Kafka

Core Computer Science: Data Structures & Algorithms, Object-Oriented Programming, Operating Systems, Computer Networks, Database Management Systems, Cloud Computing

Developer Tools & Platforms: Docker, Git, GitHub, Postman, Swagger, IntelliJ IDEA, VS Code, OCI Foundations

EXPERIENCE

Software Engineering Intern

Nov 2025 – Feb 2026

Makeloop Technology Labs Pvt. Ltd.

- Independently built operational dashboards for billing, invoice management, payment tracking and Razorpay transaction monitoring used by internal operations and finance teams
- Developed React interfaces for customer management and billing flows, applying optimizations such as infinite scrolling and debounced search to keep data-heavy views responsive
- Integrated multiple FastAPI-based REST services into the frontend using Swagger contracts, handling request/response mapping, environment-based configuration and error states at the UI layer
- Designed Briks, a reusable JSON-configurable component system for dynamic page composition, and implemented features in Koadz, a no-code website builder built on Briks
- Worked in a collaborative engineering workflow with feature branching, pull requests, code reviews, debugging and close coordination with backend engineers

PROJECTS

BillNow | Java, Spring Boot, PostgreSQL, React, Razorpay

2024

- Built a billing and invoicing system that supports invoice generation, order management, payment tracking and basic financial workflows
- Implemented backend REST APIs with Spring Boot and JPA/Hibernate for invoice processing, transaction handling and persistence in PostgreSQL
- Designed normalized database schemas for customers, invoices, orders and payments to ensure consistent financial records and efficient queries
- Integrated Razorpay payment flows and standardized JSON serialization with Jackson ObjectMapper to reduce API parsing errors and integration issues

MedRack | Java, Spring Boot, React, PostgreSQL, IPFS, Polygon

2025

- Built an electronic health record system that gives patients controlled access to their medical data while preserving a verifiable audit trail of record changes
- Designed a hybrid storage model where encrypted medical files are stored on IPFS and their immutable references are recorded on Polygon to provide tamper-evident access history
- Implemented Spring Boot REST APIs for authentication, authorization and role-based permissions, following a layered backend architecture for maintainability
- Developed a React interface for doctors and patients to upload, retrieve and manage records, enforcing access rules at both UI and API layers
- Implemented secure file access workflows using role-based authorization and blockchain-backed audit logging for medical record traceability

TaskPro | JavaScript, React, Node.js, Express.js, MongoDB

2024

- Built a task management web app where teams can create projects, assign tasks and track status in real time
- Implemented REST APIs with Node.js/Express and JWT-based authentication, and modeled MongoDB collections for users, projects and tasks
- Added features like task status updates, filtering and activity indicators so multiple users can collaborate on shared project boards
